

[Written Interview]

- ▶ **Position Applied For** : UX / UI Designer
- ▶ **Type** : Full Time (On-site)

The classification of Entry-Level and Junior-Level

Our company classifies **Entry-Level** and **Junior-Level** based on the following criteria.
Please refer to this when selecting your application level.

▶ **Entry-Level**

The questions below are designed to assess the foundational knowledge essential for performing the duties of an Entry-Level UX/UI Designer.

Please be aware that insufficient familiarity with this material will preclude successful job performance, even with company-provided training. Therefore, we strongly advise applicants to thoroughly study the necessary concepts and apply during our next recruitment cycle.

Q1. Assesses basic understanding of responsive design and efficiency.

What do you believe is the main reason for using Auto Layout in Figma? Can you show an example from your portfolio where you applied Auto Layout?

=>

Q2. Assesses understanding of reusability and basic system building capabilities.

Assuming you are creating a 'Button Set' using Figma's Component features, how would you utilize Component Properties?

=>

Q3. Confirms the ability to visualize and concretize ideas using the tool.

What is your level of proficiency with Figma's Prototyping features, and what types of interactions have you primarily created?

=>

Q4. Assesses understanding of fundamental UX ethics and principles.

Why do you think Accessibility is important in UI design, and how have you applied it in your designs? Please use your portfolio to explain.

=>

Q5. Confirms a clear perspective on the basic building blocks of UI.

Among the foundational elements of a design system—color, typography, and spacing—which do you consider the most crucial when designing, and why? Support your answer with a portfolio example.

=>

Q6. Assesses trend awareness and critical analysis skills.

Provide an example of a mobile app UI you recently found impressive. Explain three design principles that lead you to evaluate that design as successful.

=>

Q7. Assesses the initiative and effort put into self-learning and growth.

What websites or communities do you primarily refer to in order to keep up with design trends?

=>

► Junior-Level UX/UI Designer

The questions below are designed to assess the foundational knowledge and proficiency essential for a Junior-Level UX/UI Designer.

If you find that you are not sufficiently familiar with this material, we kindly request that you apply for the Entry-Level position instead.

Q1. Assesses the ability to manage and scale large-scale design systems.

When a project scales up, how have you utilized Figma's Styles and Variables features to manage design consistency and efficiency? Please provide a specific case study.

=>

Q2. Assesses collaboration skills, file hygiene, and understanding of development needs.

To ensure a smooth Design Handoff to the development team, how do you set up and manage the file organization and naming conventions within Figma?

=>

Q3. Assesses the ability to utilize tools deeply to enhance productivity.

Introduce 2–3 of the most frequently used or helpful Figma plugins you rely on and explain how they increased your work efficiency.

=>

Q4. Assesses the ability to solve design problems and achieve results using a data-driven approach.

Describe your experience improving conversion rates by conducting A/B testing on a specific UI element (e.g., CTA button location, form layout). Provide the rationale for your design decision based on data.

=>

Q5. Assesses planning skills for simplifying complexity and improving user experience.

Describe your specific design decisions on how you optimized the UI layout to reduce the user's 'Cognitive Load' in a mobile environment.

=>

Q6. Assesses the ability to understand system limitations and make sound decisions.

Describe a case in a previous project where a trade-off occurred between design consistency and flexibility, and how you resolved the conflict.

=>

Q7. Assesses communication and conflict resolution skills.

When receiving design feedback, how did you logically resolve a conflict of opinion with a team member or Product Manager (PM) to reach the best conclusion?

=>

Q8. Which do you consider more important: the completeness (quality) of the UX/UI design or adherence to the deadline?

=>

Q9. If given the opportunity, would you be willing to become a Project Leader and proactively drive the project forward?

=>

 Application Position:

Q1. Which position are you applying for: Entry-Level or Junior-Level?

=>

Q2. What are your salary expectations?

=>

TAM79 looks forward to meeting you.
